SecOps Troubleshooting: Installable Alerts in Content Manager not Displaying
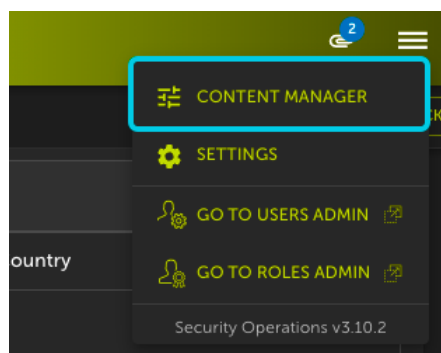

1 month ago · 0 replies

Y yul pertierra

Devo Security Operations (SecOps) is a purpose-built, context-rich application framework that automates security expertise, speeds investigation and triage, reduces required resources, and magnifies response capability.
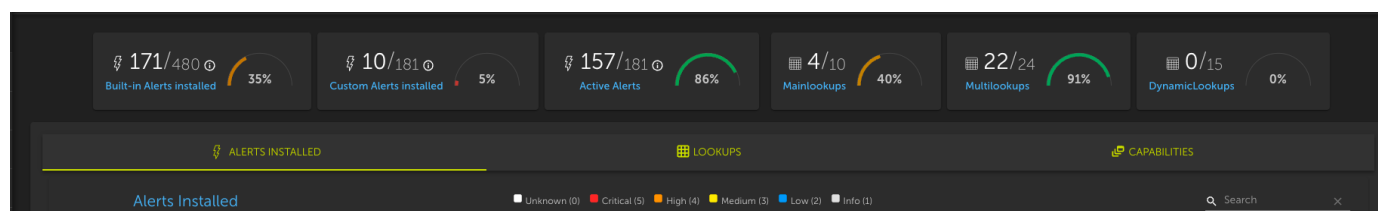

In this article, we're going to show you a quick way to fix installable alerts that don't display in the content manager.
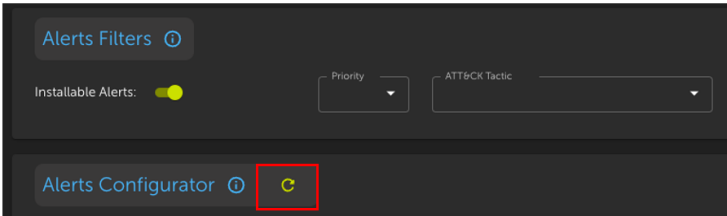

Solution

Once you are inside the dashboard panel on Secops, click on the menu to open the content manager.

Go to the *Alerts Installed* menu.

Scroll down and hit this refresh button icon:

If the problem persists, please contact **support@devo.com**
